

## 12-bit 1-channel 5-100 kSPS SAR ADC

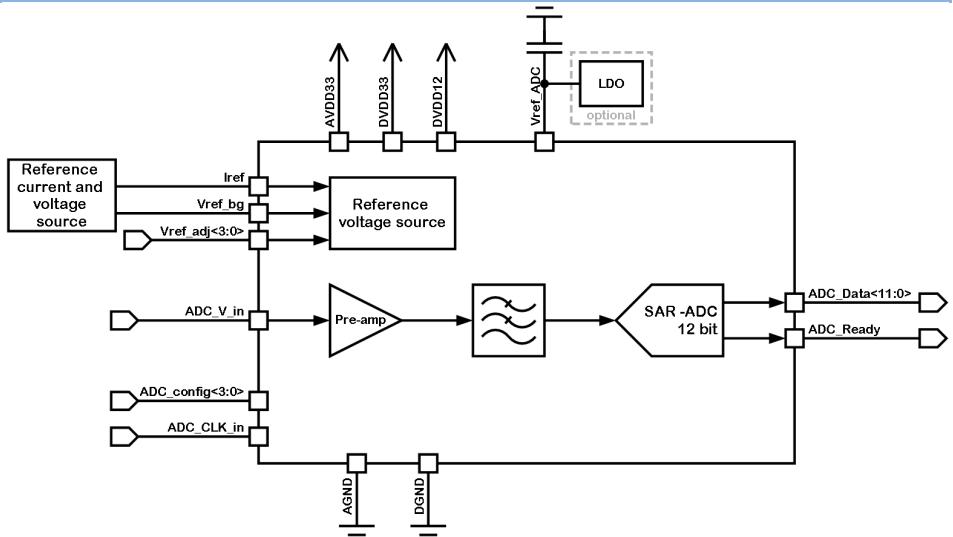

### OVERVIEW

055TSMC\_ADC\_02 is a 12-bit 1-channel SAR ADC that is designed to process audio signals from linear microphone input. The block consists of SAR ADC core, preamplifier, low pass filter and reference voltage source. The preamplifier has a gain in range from 0 to 36 dB and allows to amplify the input signal to the full amplitude of the ADC.

IP technology: TSMC CMOS 55nm technology.

IP status: silicon proven.

Silicon area: 0.055 mm<sup>2</sup>.
