

3.3 - 4.2V to 0 - 200V step-up DC/DC converter
OVERVIEW

180XFAB_DCDC_03 is a DC/DC step-up voltage converter that generates +200V output voltage from 3.3V to 4.2V. The DC/DC is designed for no load at the output at 44uA current consumption. The block contains of OTA and transistor-capacitive voltage multiplier cells. Shutdown mode is activated by setting **en** to “0” and turns off the DC/DC converter. Current consumption decrease with output voltage increasing. It will take 20ms to charge external 1nF capacitor from 0 to 200V.

IP technology: XFAB XT018.

IP status: silicon proven.

Area: 0.97mm².
