

## 50 mA LDO voltage regulator (output voltage 0.9V/1.2V/1.34V)

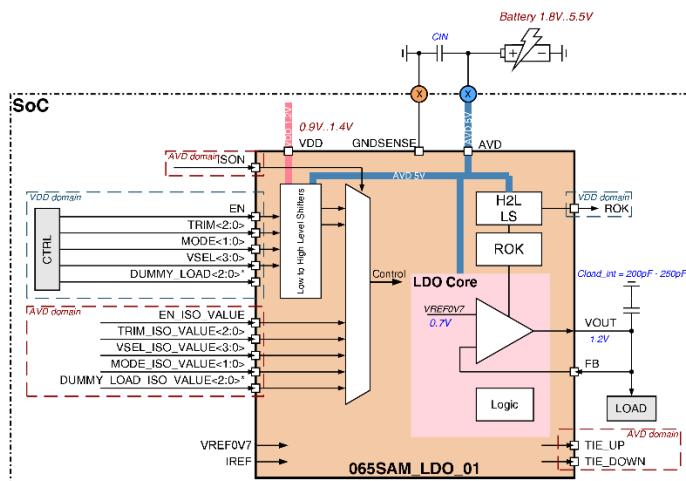

### OVERVIEW

065SAM\_LDO\_01 is a low drop out voltage regulator designed to supply integrated circuits with stable and precise voltage. The LDO inputs voltage AVD from 1.8V to 5.5V and converts this voltage into a voltage VOUT 0.9V/1.2V/1.35V with 50mA load capacity. A Regulation OK (ROK) signal inform the system that LDO has completed its booting sequence and if its output is maintaining regulation for the current drawn by the load.

IP technology: Samsung 65nm.

IP status: silicon proven.

Area: 0.085mm<sup>2</sup>.

### ELECTRICAL CHARACTERISTICS

| Parameter                         | Symbol                               | Conditions  | Value |      |      | Unit |
|-----------------------------------|--------------------------------------|---|-------|------|------|------|
|                                   |                                      |   | min   | typ. | max  |      |
| Supply voltage                    | AVD                                  | -   | 1.8   | -    | 5.5  | V    |
