

15mA LDO voltage regulator (output voltage value 1.15V/1.2 V/1.25V/1.3V) with BG (0.6V) and I2C (5uA, 10uA, 20uA, 50uA)

OVERVIEW

130GF_LDO_03 is a Power management unit, designed to supply integrated circuits with stable and precise voltage. IP includes Bandgap block (BG), Voltage to current convertor (V2I), LDO to convert 1.3V – 2.0V voltage to 1.2V and supply analog circuits with load up to 15mA. Bandgap is a voltage reference source, where voltage is formed independently from temperature and power supply variations, and where typical reference voltage is 0.6V. V2I is a Voltage-to-Current converter to generate required nominal values of reference current to analog blocks.

IP technology: GF 130nm CSOI.

IP status: pre-silicon verification.

Area: 0.092mm².

ELECTRICAL CHARACTERISTICS

Parameter	Symbol	Conditions	Value			Units
			min	typ.	max	
Supply voltage	V _{VCC18}	–	1.3	–	2.0	V
Operating temperature range	T _j	–	0	+50	+105	°C
Current consumption	I _{CC}	–	–	0.15	–	mA
Standby current	I _{SBY}	–	–	5	–	nA
Internal load capacitor	C _{load}	–	0.3	–	1.5	nF
LDO output current	I _{load}	–	–	15	–	mA
Output voltage reference	V _{BG}	–	–	0.6	–	V
Output voltage reference deviation	dV _{BG}	–	-5.7	–	5.7	%
Output current reference	I5U	–	–	5	–	uA
	I10U	–	9.6	9.8	9.95	
	I20U	–	–	20	–	
	I50U	–	–	50	–	
LDO output voltage	V _{OUT}	Adjustable	–	1.15	–	V
			1.16	1.19	1.21	
			–	1.25	–	
			–	1.30	–	
Start-up time	T _{start}	LDO+BG	–	60	90	us
