

20 to 50 MHz crystal oscillator

OVERVIEW

055TSMC_OSC_01 is a reference frequency generator designed to form a reference signal in the frequency range from 10 to 50MHz. The block consists of an amplifier, internal load capacitances, ecl-to-cmos convertor for generating CMOS output signal.

Tunable internal load capacitances (XO_C1<3:0> and XO_C2<3:0>) allow to adjust the quartz resonator frequency without using external components.

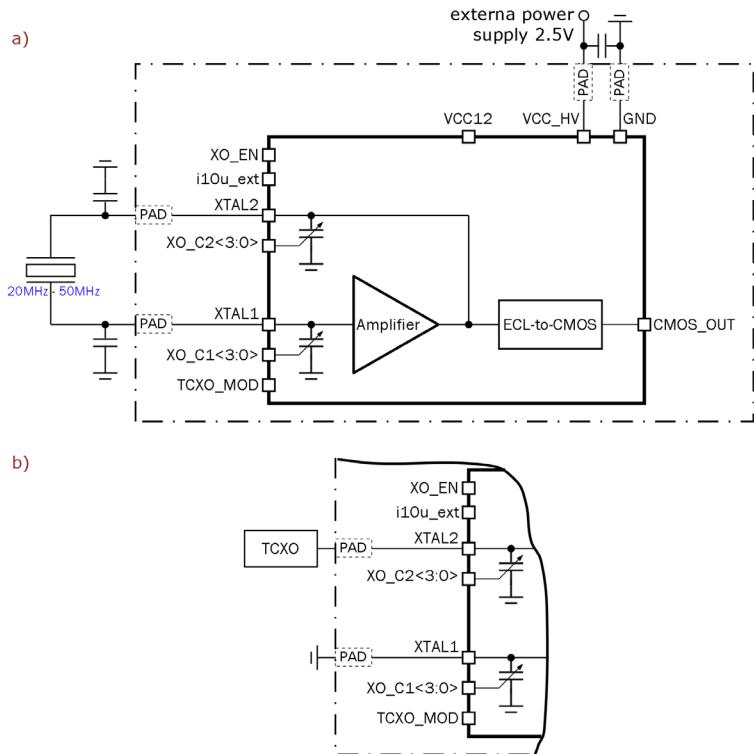

Oscillator has two modes:

- quartz mode (XTAL) (a);
- internal generator mode (TCXO) (b).

IP technology: TSMC CMOS 55 nm.

IP status: silicon proven.

Area: 0.051mm².
