

## Phase-frequency detector in ECL logic

### SPECIFICATION

#### 1 FEATURES

- AMS035 BiCMOS 0.35  $\mu\text{m}$
- Differential structure
- Ability to work with VCOs with both positive and negative frequency dependence of the control voltage
- Input frequencies up to 100MHz
- Only-up/only-down test modes
- External reset circuit
- Portable to other technologies (upon request)

#### 2 APPLICATION

- Phase-locked loop synthesizer

#### 3 OVERVIEW

The phase-frequency detector (PFD) consists of 2 D-trigger with reset from external circuit, performed in ECL logic and multiplexer, which allow to switch the input signals to the corresponding inputs.

The block is fabricated on AMS035 BiCMOS 0.35  $\mu\text{m}$  technology.
